Senior Fullstack Developer - Software Engineer

Anthony Vo

I'm a creative thinker and do-er who have a strong passion with 9 year experiences in software development. My professional focus is software development, ecommerce & management systems, and customer services. I always try to understand my target audience as much as I can by using marketing strategies to interact with clients and add values into services provided in order to build a long-term relationship.

What I Do

Creative Idea
I can help you with defining your online business requirements and guide throughout the execution. I ensure that your store is not only up and running smoothly, but continuously optimized to keep up with the competition and push up performance.

Profesional Design
Design is a rather broad and vague term. When someone says "I'm a designer," it is not immediately clear what they actually do day to day. My goal is to develop an engaging, customer-led experience that drives sales by converting new and existing visitors.

App Development
I have experiences in delivering sites to both end customers and sub-suppliers. Having knowledge to build a based system by C# language & .Net framework and I also have experiences in CMS platforms like Sitecore, Umbraco, EpiServer…

Project Management
More and more organizations are adopting an Agile style of project management. Agile is a collaborative methodology that uses short development cycles called "sprints" to incorporate stakeholder and customer feedback along the way. The goal is to embrace flexibility and continuous improvement, resulting in a better end product.

My Responsibilities

Software Development
- Develop winform applications, web applications, web services, mobile applications and design UI/UX web.
- Research new technologies, work multi-task and multiple projects.
- Find solutions for issues and build architecture for systems.
- Review team member's source code and refactor code.
- Integration with APIs from third parties.
- Writing automated test.

Communication And Collaboration
- Join daily meeting with customers and team members, make sure all relevant information to the team and project is shared and discussed before acknowledgement.
- Support team members and customers in ideas, solutions and technical issues.
- Manage and track the tasks of team members.
- Onsite in customers' side to get requirements and business rules of system, recommend ideas for customers.
- Handle problems in a short time directly at customers' side.

Process And Development Practices
- Follow software development process, especially Scrum agile disciplines and principles.
- Contribute ideas to improve process and development practices.

Anthony Vo

Professional Summary

• 9 year experience in software development. (WebApp, WinForm and Hybrid mobile app).

• Understanding of software development processes and concepts.

• Having development experiences in title insurance, medicine, social networking, management and e-commerce system.

• Having experience on cloud technologies such as AWS, Microsoft Azure.

• Having experience on automated testing (Specflow, Slenium framework).

• Be able to work under high pressure.

• A proven ability to perform any assigned task.

• Ability to proactively identify and resolve problems.

• Willing to lear and take direction.

Software Development

Algorithms	85%	Problem Solving	90%
Data Structures	80%	Cloud Computing (AWS, Microsoft Azure)	80%
System Designs	85%	Automated Testing (Specflow, Slenium framework)	90%

Bachelor of Software Engineering

📍 Danang, Vietnam

• The honor certificate for outstanding performance in Programming C subject
• The honor certificate for outstanding academic performance in Data structures and Algorithms in Programming Java subject
• The honor certificate for outstanding performance in Programming C# .Net subject
• Bachelor of Software Engineering (Information System)

Certificate

08/2015

Epi Server

Epi Server CMS 7

Episerver is a content management system (CMS) for web publication developed in Sweden. Episerver CMS is used to enable multiple web editors to jointly develop a larger organisation's external website, extranet or intranet. The web editors need not install any special software on their computers as they can use a web browser to edit web pages. Nor do the web editors need to know about HTML and other underlying technologies. Instead, they can work in a similar manner to standard word processing. Episerver CMS is based on Microsoft's .NET platform.

03/2014

Microsoft

Programming in HTML5 with JavaScript and CSS3

Programming in HTML5 with JavaScript and CSS3 exam is one of the two exams required to get your Microsoft Certified Solutions Associate (MCSA) Web Applications Certification.
